ABSTRACT

This project is a web based shopping system for an existing shop. The project objective is to deliver the online shopping application into android platform. This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the shop anywhere through internet by using an android device. Thus the customer will get the service of online shopping and home delivery from his favorite shop. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains. If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as steam. Since the application is available in the Smartphone it is easily accessible and always available.

INTRODUCTION:

Gaming world is the process whereby consumers directly buy goods or services from a seller in real-time, without an intermediary service, over the Internet. It is a form of electronic commerce. An online shop, eshop, e-store, Internet shop, webshop, webstore, online store, or virtual store evokes the physical analogy of buying products or services at a bricks-and-mortar retailer or in a shopping center.

A good online store is easy to navigate and browse for possible purchases. It has a product catalog that customers can use to browse the search criteria (usually a type, price, material, age, etc.), information about the products, the sellers, and the service center. Online stores may also discuss business conditions and a Complaints Procedure.

If a shopper finds a product to purchase, clicking "send" will add the item to the shopping cart. The shopping cart collects all items to be purchased. Once a shopper is satisfied with their selections, the shopper makes a binding order and payment using a credit card or other financial arrangement. Therefore, implementing usability testing is highly important for an online store to avoid the reduce of overall performances of the online store.

PROBLEM STATEMENT:

Online shopping basically provides the way consumers go shopping and purchase services and goods with reasonable price on the Internet. For some consumers, shopping and purchasing online have become part of their daily lives, while others may not even care about it. At this point, I wonder what factors influence online purchasing behavior and explain the difference in online buying behavior among Internet users. This web site intends to investigate which factors affect online purchasing behavior.

Online stores are usually available 24 hours a day, and many consumers in Western countries have Internet access both at work and at home. Other establishments such as Internet cafes, community centers and schools provide internet access as well. In contrast, visiting a conventional retail store requires travel or commuting and costs such as gas, parking, or bus tickets, and must typically take place during business hours. In the event of a problem with the item (e.g., the product was not what the consumer ordered or the product was not satisfactory), consumers are concerned with the ease of returning an item in exchange for the correct product or a refund.

Modules :

In our project we have following modules

- Log in
- Sign in
- Shopping
- Cart
- View Profile

MODULE DESCRIPTION :

Log in:

Log in page is for existing users. Logging in (or logging on or signing in or signing on) is the process by which an individual gains access to a computer system by identifying and authenticating themselves. The user credentials are typically some form of "username" and a matching "password", and these credentials themselves are sometimes referred to as a login, (or a logon or a sign-in or a sign-on). In practice, modern secure systems also often require a second factor for extra security. When access is no longer needed, the user can log out

Sign Up:

Sign up is for new users. Logging out means to end access to a computer system or a website. Logging out informs the computer or website that the current user wishes to end the login session. Log out is also known as log off, sign off or sign out.

Shopping:

Shopping is for the details about buying Products. One is for the cost to ship one item and the second and subsequent steps of an item. Online shopping is a form of electronic commerce which allows consumers to directly buy goods or services from a seller over the Internet using a web browser. Consumers find a product of interest by visiting the website of the retailer directly or by searching among alternative vendors using a shopping search engine, which displays the same product's availability and pricing at different e-retailers. As of 2016, customers can shop online using a range of different computers and devices, including desktop computers, laptops, tablet computers and smartphones.

Payment:

A payment gateway is a merchant service provided by an e-commerce application service provider that authorizes credit card or direct payments processing for e-businesses, online retailers, bricks and clicks, or traditional brick and mortar. The payment gateway may be provided by a bank to its customers, but can be provided by a specialised financial service provider as a separate service, such as a payment service provider.

A payment gateway facilitates a payment transaction by the transfer of information between a payment portal (such as a website, mobile phone or interactive voice response service) and the front end processor or acquiring bank.

View Profile:

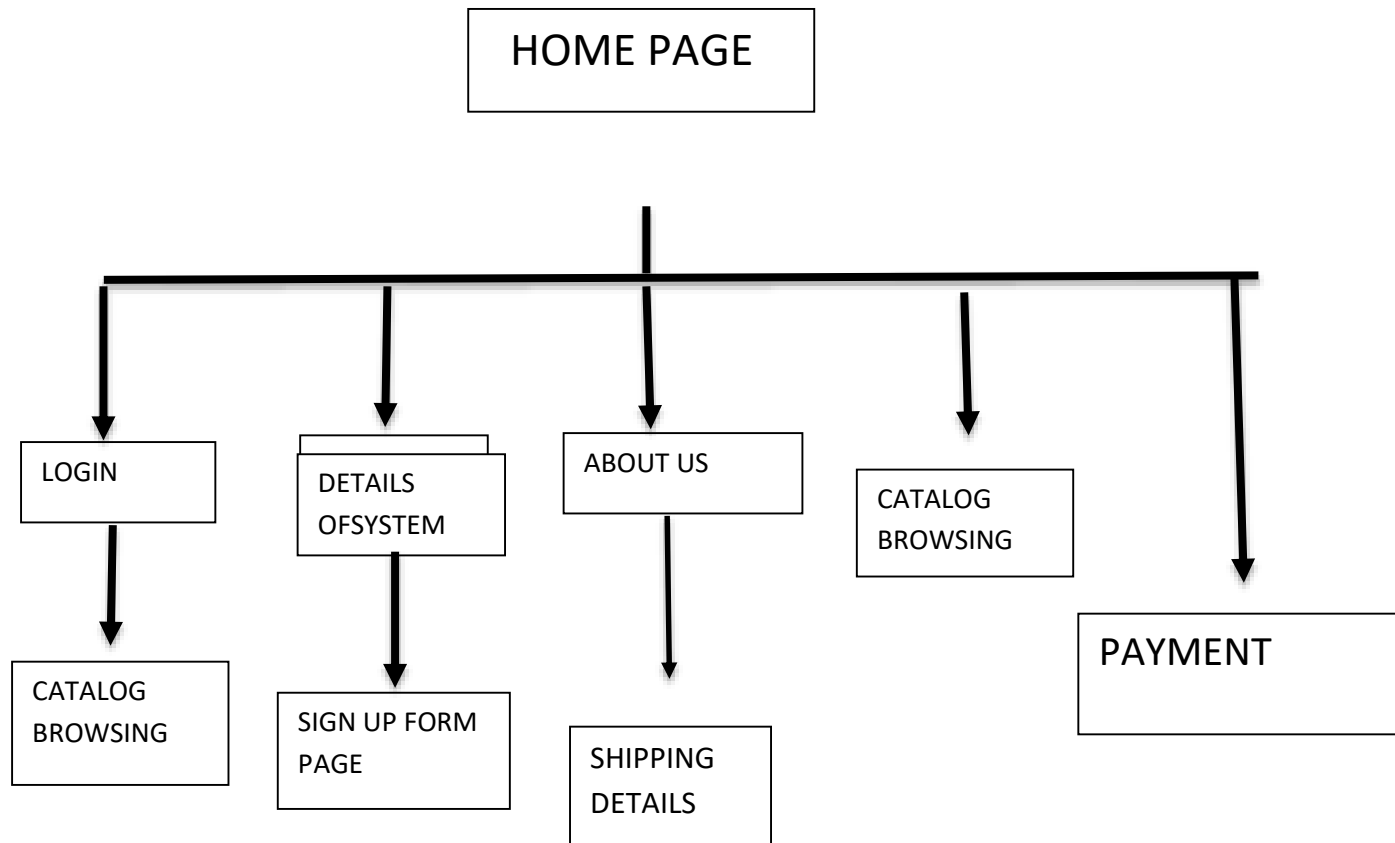

Customer accounts management module maintain the information about all the customers this information is very useful to maintain the user's details.

Cart:

A shopping cart (American English) or trolley (British English), also known by a variety of other names, is a cart supplied by a shop, especially supermarkets, for use by customers inside the shop for transport of merchandise to the checkout counter during shopping. In many cases customers can then also use the cart to transport their purchased goods to their vehicles, but some carts are designed to prevent them from leaving the shop.

In many places in the United States and the United Kingdom, customers are allowed to leave the carts in designated areas within the parking lot, and store personnel will return the carts to the storage area. In many continental European premises, however, coin- (or token-) operated locking mechanisms are provided to encourage shoppers to return the carts to the correct location after use.

SYSTEM DESIGN :

SOFTWARE REQUIREMENTS:

Operating System: Windows 10

Web Browser: Chrome, UC Browser

Designing Tool: Sublime Text 3, Notepad ++, Dreamweaver

<title>About</title>
</head>

    <a href="3.html"></a>

    <center>

<p>

    We Deal In All Kinds Of New Branded Computer Systems, Branded High
End Gaming System & We Also Deals In Branded Consoles and Game Cds etc..

    <br>

    <br>

    The company was founded by Sathaam, a U.S. immigrant from Taiwan, in
2000.Sathaam was Gaming World's chairman and CEO until August 1, 2018, when
it was announced he would step down as CEO and chairman while remaining a
member of the board of directors and executive committee.He was succeeded by
Tally Shoban.Sathaam also retained his position as President of GAMing World's
operations.In 2020, upon the departure of shoban, Sathaam took up his old role
as CEO of the company.
